**IBM Canada Ltd. — Information Technology and Telecom Consultants — \$108,882,490 from Public Services and Procurement Canada | Services publics et Approvisionnement Canada (dated 2022-03-28)** 2022-03-28

A contract of this magnitude with PSPC may signal strong incumbency in federal IT and telecom consulting, which could represent both a revenue concentration risk (dependency on a single dominant client) and a competitive moat. Stakeholders assessing IBM Canada's government business footprint should consider the renewal risk, competitive procurement exposure, and the regulatory and policy environment governing large federal IT contracts. The existence of prior lobbying registrations and communications with government departments adds a dimension of government-relations activity that may be relevant to understanding how this relationship was cultivated and maintained. [contracts:1139805](#)

**IBM CANADA LTD. received a contract titled "Information technology and telecommunications consultants" valued at \$303,096,629.16 from Public Services and Procurement Canada | Services publics et Approvisionnement Canada, dated 2022-01-24.** 2022-01-24

The magnitude of this single contract (\$303M+) and its proximity in date to a second large contract from the same department (\$108M+, March 2022) may indicate significant ongoing federal revenue concentration for IBM Canada Ltd. with a single government counterparty. For due-diligence purposes, this concentration of federal procurement relationships may be material to assessments of regulatory exposure, supplier dependency, or competitive procurement dynamics. [contracts:1154402](#)

**IBM — Management Consulting — \$150,436,284 from Public Services and Procurement Canada | Services publics et Approvisionnement Canada (dated 2011-06-29)** 2011-06-29

A contract of this magnitude from PSPC signals IBM's deep integration into federal government operations. For due-diligence purposes, this may be relevant to assessing IBM Canada's revenue dependence on public-sector clients, the competitiveness of the procurement process, any associated subcontracting or partnership arrangements, and continuity risks if the government relationship were to change. It may also be relevant in assessing whether any related parties have conflicts of interest tied to federal procurement. [contracts:1115671](#)

**Canada invests in the semiconductor sector in partnership with IBM Canada and C2MI — The project will increase advanced packaging and commercialization capabilities (dated 2025-11-28)** 2025-11-28

The announcement may signal expanding federal financial exposure to IBM Canada in a strategically sensitive industrial sector (semiconductors). The involvement of C2MI, a Quebec-based microelectronics hub, suggests potential regional economic and industrial policy dimensions. The absence of a disclosed investment amount in the record limits assessment of the financial scope of this commitment relative to prior federal contracts with IBM Canada. [source\\_records:73520](#)

**A news article dated 2023-12-07 reports that more organizations, including CGI and IBM, have signed on to Canada's voluntary AI code of conduct. The snippet notes that recent advances in AI technology are benefiting society in ways including improving supply chain management and enhancing health.** 2023-12-07

Voluntary code adherence may enhance IBM's and CGI's standing as preferred federal government contractors on AI-related procurements and may reduce perceived regulatory or reputational risk associated with their AI product and service offerings. It could also signal future lobbying or consultation engagement as Canada's AI regulatory framework evolves. The absence of binding obligations means the commercial significance depends heavily on how the code is enforced or referenced in procurement criteria. [source\\_records:79547](#)

**IBM Canada Limited - IBM Canada Ltée — SIF Stream2- Growth — \$24,885,000 grant from Innovation, Science and Economic Development Canada | Innovation, Sciences et Développement économique Canada (dated 2023-01-01)** 2023-01-01

The grant represents a significant federal financial commitment to IBM Canada's growth activities, potentially affecting IBM Canada's competitive positioning, R&D capacity, and obligations under any associated contribution agreement conditions (e.g., job creation, Canadian IP retention, capital expenditure targets). For counterparties conducting diligence on IBM Canada, this grant may introduce regulatory compliance obligations, clawback risk, or constraints on asset disposals tied to the funded project. [grants:748292](#)
